

# ACCIJOB SQL CURRICULUM

PostgreSQL + pgAdmin 4 + Visual Studio Code Edition

Instructor:	Sayyed Siraj Ali
Duration:	6 Weeks   24 Sessions (4 sessions/week)
Session Length:	2 hours per session
Total Hours:	48 hours
Platform:	PostgreSQL 16 · pgAdmin 4 · Visual Studio Code
Database:	RetailMart (10+ Tables · 10k-50k Rows)

## Curriculum Flow Philosophy: Concept Before Code, Practice Before Project

This curriculum follows a progressive, dependency-based learning structure ensuring a complete transition from foundational SQL concepts to analytical and performance-based SQL proficiency. Each session incrementally builds upon prior knowledge to ensure conceptual retention and industry application readiness.

## TABLE 1: Day-Wise Overview

Day	Major Topic
1	Introduction to SQL & Installation
2	Basic Queries & DDL Commands
3	PostgreSQL Data Types
4	Constraints & Keys
5	Data Filtering & Sorting
6	Aggregate Functions & Grouping
7	Conditional Logic & Derived Columns
8	Joins - Part 1 (Foundations)
9	Joins - Part 2 (Advanced)
10	Self Join, Cross Join & Set Operations
11	Subqueries - Part 1
12	Subqueries - Part 2 & CTEs
13	Window Functions - Part 1 (Ranking)
14	Window Functions - Part 2 (Analytics)
15	Transactions & Error Control
16	ACID Properties & Exception Handling
17	Normalization & Data Modeling
18	Views & Materialized Views

<b>19</b>	Functions (PL/pgSQL)
<b>20</b>	Stored Procedures
<b>21</b>	Query Optimization, Indexing & Security
<b>22</b>	RetailMart Analytics Project - Part 1
<b>23</b>	RetailMart Analytics Project - Part 2
<b>24</b>	Dashboard Creation & Deployment

## TABLE 2: Detailed Day-Wise Curriculum

Day	Topic	Subtopics
1	<b>Introduction to SQL &amp; Installation</b>	<ul style="list-style-type: none"> <li>• Introduction to SQL (What, Why, When)</li> <li>• Components of SQL (DDL, DML, DCL, TCL, DQL)</li> <li>• Database vs Schema</li> <li>• Database objects (Table, View, Index)</li> <li>• DBMS vs RDBMS</li> <li>• PostgreSQL Architecture</li> <li>• Install PostgreSQL 16, pgAdmin 4, VS Code</li> <li>• Configure VS Code extensions</li> </ul>
2	<b>Basic Queries &amp; DDL Commands</b>	<ul style="list-style-type: none"> <li>• Writing basic SQL queries</li> <li>• DDL: CREATE DATABASE, CREATE SCHEMA, CREATE TABLE</li> <li>• DROP, ALTER commands</li> <li>• SELECT version() and system queries</li> <li>• Create RetailMart database</li> <li>• Onboard all 8 schemas</li> <li>• Create all tables</li> <li>• Import CSV data</li> </ul>
3	<b>PostgreSQL Data Types</b>	<ul style="list-style-type: none"> <li>• Numeric types (INT, DECIMAL, SERIAL)</li> <li>• Text types (CHAR, VARCHAR, TEXT)</li> <li>• Date/Time types (DATE, TIMESTAMP, INTERVAL)</li> <li>• Boolean type</li> <li>• Advanced types (JSON, JSONB, UUID, ARRAY)</li> <li>• Other types (BYTEA, MONEY, INET)</li> <li>• Selecting correct data types</li> <li>• Naming conventions</li> <li>• Altering columns</li> </ul>
4	<b>Constraints &amp; Keys</b>	<ul style="list-style-type: none"> <li>• Constraints: NOT NULL, UNIQUE, CHECK, DEFAULT</li> <li>• PRIMARY KEY (single column)</li> <li>• COMPOSITE PRIMARY KEY</li> <li>• FOREIGN KEY</li> <li>• Natural vs Surrogate keys</li> <li>• Alternate keys</li> <li>• Cascading actions (CASCADE, RESTRICT, SET NULL)</li> <li>• Adding/Dropping constraints</li> </ul>

5	<b>Data Filtering &amp; Sorting</b>	<ul style="list-style-type: none"> <li>• SELECT and WHERE clauses</li> <li>• Logical operators (AND, OR, NOT)</li> <li>• Comparison operators (=, !=, &gt;, &lt;, &gt;=, &lt;=)</li> <li>• Pattern matching (LIKE, ILIKE, %, _)</li> <li>• BETWEEN, IN, NOT IN</li> <li>• IS NULL, IS NOT NULL</li> <li>• DISTINCT, DISTINCT ON</li> <li>• ORDER BY (ASC, DESC)</li> <li>• LIMIT and OFFSET for pagination</li> </ul>
6	<b>Aggregate Functions &amp; Grouping</b>	<ul style="list-style-type: none"> <li>• Aggregate functions: COUNT, SUM, AVG, MIN, MAX</li> <li>• STRING_AGG, ARRAY_AGG</li> <li>• GROUP BY (single and multiple columns)</li> <li>• HAVING clause for filtering aggregated data</li> <li>• HAVING vs WHERE</li> <li>• Sorting grouped results</li> <li>• Common patterns (sales by month, top customers)</li> <li>• Performance considerations</li> </ul>
7	<b>Conditional Logic &amp; Derived Columns</b>	<ul style="list-style-type: none"> <li>• CASE WHEN (simple and searched)</li> <li>• Nested CASE statements</li> <li>• COALESCE for NULL handling</li> <li>• NULLIF to avoid division by zero</li> <li>• Derived/computed columns</li> <li>• Column aliases</li> <li>• Complex data categorization</li> <li>• Customer segmentation examples</li> </ul>
8	<b>Joins - Part 1 (Foundations)</b>	<ul style="list-style-type: none"> <li>• JOIN fundamentals and concepts</li> <li>• INNER JOIN syntax and use cases</li> <li>• LEFT JOIN (LEFT OUTER JOIN)</li> <li>• RIGHT JOIN (RIGHT OUTER JOIN)</li> <li>• Multi-table joins</li> <li>• Join conditions and syntax variations</li> <li>• Table aliases</li> <li>• Real-world examples</li> </ul>
9	<b>Joins - Part 2 (Advanced)</b>	<ul style="list-style-type: none"> <li>• FULL OUTER JOIN</li> <li>• Join order and performance implications</li> <li>• Handling NULLs in joins</li> <li>• Optimizing join performance</li> <li>• Using indexes for joins</li> <li>• EXPLAIN plan for joins</li> <li>• Complex multi-table scenarios</li> <li>• Join anti-patterns to avoid</li> </ul>

10	<b>Self Join, Cross Join &amp; Set Operations</b>	<ul style="list-style-type: none"> <li>• Self Join concepts and use cases</li> <li>• Hierarchical data (employee-manager)</li> <li>• CROSS JOIN (Cartesian product)</li> <li>• Set operations: UNION (removes duplicates)</li> <li>• UNION ALL (keeps duplicates)</li> <li>• INTERSECT (common records)</li> <li>• EXCEPT (difference between sets)</li> <li>• Combining multiple operations</li> </ul>
11	<b>Subqueries - Part 1</b>	<ul style="list-style-type: none"> <li>• Introduction to subqueries</li> <li>• Scalar subqueries (single value)</li> <li>• Multi-row subqueries</li> <li>• Subqueries in WHERE clause</li> <li>• Subqueries in SELECT clause</li> <li>• Subqueries in FROM clause (derived tables)</li> <li>• IN, NOT IN operators</li> <li>• EXISTS, NOT EXISTS</li> <li>• Performance considerations</li> </ul>
12	<b>Subqueries - Part 2 &amp; CTEs</b>	<ul style="list-style-type: none"> <li>• Correlated subqueries</li> <li>• ANY, SOME, ALL operators</li> <li>• Common Table Expressions (CTEs)</li> <li>• WITH clause syntax</li> <li>• Multiple CTEs in single query</li> <li>• Recursive CTEs</li> <li>• Base case and recursive case</li> <li>• Hierarchical queries (org charts, category trees)</li> <li>• Depth-first vs breadth-first</li> </ul>
13	<b>Window Functions - Part 1 (Ranking)</b>	<ul style="list-style-type: none"> <li>• Introduction to window functions</li> <li>• Difference from aggregate functions</li> <li>• OVER clause</li> <li>• PARTITION BY (dividing data)</li> <li>• ORDER BY in window functions</li> <li>• ROW_NUMBER() - sequential numbering</li> <li>• RANK() - ranking with gaps</li> <li>• DENSE_RANK() - ranking without gaps</li> <li>• Top N per category problems</li> <li>• Frame clause basics</li> </ul>
14	<b>Window Functions - Part 2 (Analytics)</b>	<ul style="list-style-type: none"> <li>• LEAD() - access next row</li> <li>• LAG() - access previous row</li> <li>• FIRST_VALUE(), LAST_VALUE(), NTH_VALUE()</li> <li>• SUM() OVER - running totals</li> <li>• AVG() OVER - moving averages</li> <li>• Window frames (ROWS BETWEEN, RANGE BETWEEN)</li> <li>• Time-series analysis</li> <li>• Period-over-period comparisons</li> <li>• Trend analysis</li> <li>• Percentiles (NTILE, PERCENT_RANK)</li> </ul>

15	<b>Transactions &amp; Error Control</b>	<ul style="list-style-type: none"> <li>• Transaction fundamentals</li> <li>• BEGIN/START TRANSACTION</li> <li>• COMMIT</li> <li>• ROLLBACK</li> <li>• SAVEPOINT (creating savepoints)</li> <li>• Partial rollbacks (ROLLBACK TO SAVEPOINT)</li> <li>• RELEASE SAVEPOINT</li> <li>• Auto-commit mode</li> <li>• Practical order processing scenarios</li> <li>• Best practices</li> </ul>
16	<b>ACID Properties &amp; Exception Handling</b>	<ul style="list-style-type: none"> <li>• Atomicity - all or nothing</li> <li>• Consistency - valid state transitions</li> <li>• Isolation - concurrent transactions</li> <li>• Durability - permanent changes</li> <li>• Isolation levels (READ COMMITTED, REPEATABLE READ, SERIALIZABLE)</li> <li>• Concurrency issues (dirty reads, phantom reads, deadlocks)</li> <li>• Exception handling in PL/pgSQL</li> <li>• BEGIN...EXCEPTION blocks</li> <li>• RAISE statements</li> <li>• DO blocks</li> </ul>
17	<b>Normalization &amp; Data Modeling</b>	<ul style="list-style-type: none"> <li>• Database design principles</li> <li>• Data redundancy and anomalies</li> <li>• 1NF - atomic values, no repeating groups</li> <li>• 2NF - meet 1NF, no partial dependencies</li> <li>• 3NF - meet 2NF, no transitive dependencies</li> <li>• BCNF - stricter version of 3NF</li> <li>• Dependency diagrams</li> <li>• Denormalization strategies</li> <li>• When to denormalize</li> <li>• ER diagrams</li> </ul>
18	<b>Views &amp; Materialized Views</b>	<ul style="list-style-type: none"> <li>• CREATE VIEW syntax</li> <li>• Benefits (abstraction, security, simplification)</li> <li>• Updatable views vs read-only</li> <li>• CREATE OR REPLACE VIEW</li> <li>• Dropping views</li> <li>• Row-level and column-level security</li> <li>• CREATE MATERIALIZED VIEW</li> <li>• Physical storage of query results</li> <li>• REFRESH MATERIALIZED VIEW</li> <li>• CONCURRENTLY option</li> <li>• Indexed materialized views</li> </ul>

19	<b>Functions (PL/pgSQL)</b>	<ul style="list-style-type: none"> <li>• Introduction to PL/pgSQL</li> <li>• CREATE FUNCTION syntax</li> <li>• Function structure</li> <li>• Parameters: IN, OUT, INOUT</li> <li>• DEFAULT values, VARIADIC</li> <li>• RETURN types (scalar, TABLE, SETOF, VOID)</li> <li>• DECLARE section</li> <li>• Variable declaration</li> <li>• BEGIN...END block</li> <li>• EXCEPTION blocks and error handling</li> <li>• RAISE statements</li> <li>• Function overloading</li> </ul>
20	<b>Stored Procedures</b>	<ul style="list-style-type: none"> <li>• CREATE PROCEDURE syntax</li> <li>• Difference from functions</li> <li>• IF-ELSE statements (simple, nested)</li> <li>• IF-ELSIF-ELSE</li> <li>• CASE statements in procedures</li> <li>• LOOP - basic loop with EXIT</li> <li>• WHILE - conditional loop</li> <li>• FOR - iterating over ranges</li> <li>• FOR IN - iterating over query results</li> <li>• CONTINUE and EXIT</li> <li>• Combining functions and procedures</li> <li>• Transaction control in procedures</li> </ul>
21	<b>Query Optimization, Indexing &amp; Security</b>	<ul style="list-style-type: none"> <li>• EXPLAIN command</li> <li>• EXPLAIN ANALYZE</li> <li>• Reading execution plans</li> <li>• Identifying bottlenecks</li> <li>• B-Tree, Hash, GiST, GIN indexes</li> <li>• CREATE INDEX syntax</li> <li>• Unique, partial, multi-column indexes</li> <li>• When NOT to use indexes</li> <li>• REINDEX, VACUUM</li> <li>• SQL Injection prevention</li> <li>• Parameterized queries</li> <li>• CREATE USER/ROLE</li> <li>• GRANT and REVOKE</li> <li>• Information Schema queries</li> </ul>

22	<b>RetailMart Analytics Project - Part 1</b>	<ul style="list-style-type: none"> <li>• Project structure setup</li> <li>• 01_setup: create_analytics_schema.sql</li> <li>• Create metadata tables (kpi_metadata, log_table, refresh_history)</li> <li>• 02_kpi_queries/sales_analytics.sql: <ul style="list-style-type: none"> <li>- Total sales by period</li> <li>- Sales trends and growth</li> <li>- Revenue by category/region</li> <li>- Top selling products</li> <li>- AOV, seasonal analysis</li> </ul> </li> <li>• 02_kpi_queries/customer_analytics.sql: <ul style="list-style-type: none"> <li>- Customer acquisition trends</li> <li>- CLV calculation</li> <li>- Retention and churn</li> <li>- RFM analysis</li> <li>- Customer segmentation</li> </ul> </li> </ul>
23	<b>RetailMart Analytics Project - Part 2</b>	<ul style="list-style-type: none"> <li>• 02_kpi_queries/store_analytics.sql: <ul style="list-style-type: none"> <li>- Store performance comparison</li> <li>- Store profitability</li> <li>- Employee productivity</li> <li>- Inventory turnover</li> </ul> </li> <li>• 02_kpi_queries/product_analytics.sql: <ul style="list-style-type: none"> <li>- Product category performance</li> <li>- Product profitability</li> <li>- Fast/slow moving products</li> <li>- Return analysis</li> </ul> </li> <li>• JSON functions (json_agg, json_build_object, jsonb_set)</li> <li>• Creating JSON API functions</li> <li>• 04_documentation/export_all_json.sh</li> <li>• Data quality checks</li> </ul>
24	<b>Dashboard Creation &amp; Deployment</b>	<ul style="list-style-type: none"> <li>• 03_dashboard/data: Export query results to JSON</li> <li>• 03_dashboard/index.html: <ul style="list-style-type: none"> <li>- Semantic HTML5 structure</li> <li>- KPI cards, chart containers</li> </ul> </li> <li>• 03_dashboard/css/styles.css: <ul style="list-style-type: none"> <li>- Responsive grid layout</li> <li>- Modern card design</li> <li>- Mobile-responsive</li> </ul> </li> <li>• 03_dashboard/js/dashboard.js: <ul style="list-style-type: none"> <li>- Fetch JSON data</li> <li>- Chart.js integration</li> <li>- Interactive filters</li> </ul> </li> <li>• Visualization (Line, Bar, Pie, Doughnut charts)</li> <li>• Deploy to GitHub Pages</li> <li>• project_overview.md documentation</li> <li>• Final presentation</li> </ul>

# RetailMart Database Architecture

Schema	Description	Key Tables
core	Dimension tables	dim_date, dim_region, dim_category, dim_brand
customers	Customer data	customers, addresses, reviews, loyalty_points
sales	Sales transactions	orders, order_items, payments, shipments, returns
products	Product catalog	products, suppliers, inventory, promotions
stores	Store operations	stores, departments, employees, expenses
hr	Human resources	attendance, salary_history
finance	Financial data	expenses, revenue_summary
marketing	Marketing campaigns	campaigns, ads_spend, email_clicks

## Course Highlights

- ✓ **Industry-Ready:** Real-world business scenarios with proper schema design
- ✓ **Practical Focus:** Every concept practiced with RetailMart data
- ✓ **Analytical Emphasis:** Strong focus on window functions, CTEs, and analytics
- ✓ **Modern Tools:** PostgreSQL 16, pgAdmin 4, VS Code with SQLTools
- ✓ **Complete Workflow:** From design to optimization to visualization
- ✓ **Indian Context:** Examples from Flipkart, Amazon, Zomato, Swiggy
- ✓ **Career Focused:** Real-world project with dashboard deployment
